

Notes

Unit-5: Module 7: Non-Verbal Communication

Objectives:

The objectives are to help learners

- Describe nonverbal communication (NVC).
- Understand its importance in communication.

Expected Outcomes:

The learners shall be able to:

- Realize the importance of nonverbal communication.
- Use nonverbal communication effectively in communication as an aid.

Module Outlines:

7.1 Meaning of nonverbal communication

7.2 Advantages of using nonverbal communication

7.3 Introduction to modes of nonverbal communication

7.3.1 Open and Closed body language

7.3.2 Eye contact and Facial expression

7.3.3 Hand gestures

7.3.4 Different Types of Hand Shakes

7.3.5 Handshake Mistakes To Avoid: Common Errors And Their Impact

7.4 Cross-Cultural Diversity in Nonverbal Communication

7.5 Do's and Don'ts in NVC

7.6 Learning from experts

7.7 Activities-based learning

7.1 Overview: Meaning of Non-Verbal Communication

Nonverbal communication refers to the process of conveying messages without using spoken or written words. Instead of relying on language, it makes use of physical cues such as facial expressions, hand gestures, posture, body movement, and eye contact. These silent signals often express emotions, attitudes, and intentions more effectively than words.

Just as *italics* in writing can highlight a part of a sentence, nonverbal behavior can emphasize or alter the meaning of spoken language. For example, a firm handshake may strengthen words of welcome, while a frown can contradict a polite statement.

Researchers note that people tend to place more trust in nonverbal cues than in verbal ones, since body language often reveals genuine feelings that words may try to conceal. While earlier studies sometimes exaggerated the percentage of communication that is nonverbal, it is widely accepted that nonverbal signals play a decisive role in understanding human interaction.

The term *nonverbal communication* was first introduced in 1956 by the psychiatrist Jurgen Ruesch and writer Weldon Kees in their book *Nonverbal Communication: Notes on the Visual Perception of Human Relations*. However, awareness of the importance of nonverbal signals has existed for centuries. As early as 1605, the philosopher Francis Bacon, in *The Advancement of Learning*, observed that the physical features and expressions of the body reveal not only a person's character and disposition but also their current emotions and state of mind.

7.2 Advantages of using nonverbal communication

Nonverbal Communication can

- i. Reinforce or modify what is said in words: People may nod their heads vigorously when saying "Yes" to emphasize that they agree.

A shrug of the shoulders and a sad expression when saying "I'm fine, thanks" may actually imply that things are not really fine.

- ii. Convey information about their emotional state: Facial expression, tone of voice, and body language can often tell people exactly how a person feels, without saying a word.

Consider how often we have said to someone,

"Are you OK? You look a bit down".

We know how people feel from their nonverbal communication.

- iii. Define or reinforce the relationship between people: If we watch a couple sitting and talking, we may notice that they tend to 'mirror' each other's body language. They hold their hands in similar positions, they smile at the same time, and they turn to face each other more fully. These movements reinforce their relationship: they build on their rapport and that helps them to feel more connected.

- iv. Provide feedback to the other person: Smiles and nods tell someone that we are listening and that we agree with what they are saying; alternatively, we can convey doubt or disagreement by mere frowns or a shake of the head. We would use movement or hand gestures to indicate that we wish to speak. These subtle signals give information gently but clearly.

v. Regulate the flow of communication: There are many signals that we use to tell people that we have finished speaking, or that we wish to speak. An emphatic nod, and/or firm closing of the mouth indicate that we have nothing more to say. Making eye contact with the chair of a meeting and nodding slightly will indicate that we wish to speak.

7.3 Types and Modes of Nonverbal Communication

Judee Burgoon (1994) has identified **seven** different nonverbal dimensions:

1. Proxemics (Use of Space)

Proxemics is about how people use and interpret physical space. The distance you maintain in interactions sends strong signals.

- Examples:
 - Standing close to a friend shows intimacy, while maintaining distance in a formal setting shows respect.
 - Teachers moving around the classroom create engagement; standing stiffly at one place may signal distance.
 - In some cultures, standing very close is normal, while in others it feels uncomfortable.

2. Haptics (Touch)

Haptics is communication through touch. It expresses warmth, authority, or comfort depending on context and culture.

- Examples:
 - A firm handshake in interviews shows confidence.
 - A pat on the back encourages or praises someone.
 - Hugging a friend conveys affection and support.
 - Too much or inappropriate touch, however, can make others uneasy.

3. Chronemics (Time)

Chronemics refers to how time is used in communication. Punctuality and time allocation reflect values, priorities, and respect.

- Examples:
 - Being on time for an interview shows professionalism; being late may suggest carelessness.
 - Spending more time listening to someone shows you value their opinion.
 - In some cultures (e.g., Germany, Japan), strict punctuality is expected, while in others (e.g., India, Latin America), flexible timing is more accepted.

4. Kinesics refers to all forms of body movement such as gestures, posture, facial expressions, and eye contact. A smile, a nod, or steady eye contact can show friendliness and confidence, while cross arms or avoiding eye contact may signal discomfort or disinterest.

This is the most visible form of NVC. Your body reveals emotions and attitudes.

- From your material:
 - Facial Expressions: A smile shows warmth, a frown shows displeasure, raised eyebrows may show surprise.
 - Eye Contact: Direct eye contact creates trust and confidence; avoiding it may suggest nervousness or dishonesty.
 - Posture: Standing tall shows confidence; slouching suggests nervousness or lack of energy.
 - Gestures: Using hands while speaking can emphasize points; sweeping gestures add energy, while stiff gestures feel artificial.
 - Movement: Moving closer to the audience keeps attention; backward movement may suggest changing to a new idea.

5. Vocalics (Paralanguage)

This refers to the *way* you speak, not the words themselves.

- Examples from the book pages:
 - Voice Quality: Pleasant, relaxed voice increases attention; strained or nasal voice may distract.
 - Volume: Loud enough to be heard, but not harsh; too soft and people may miss the message.
 - Pitch: Rising pitch shows excitement or doubt; falling pitch shows finality or certainty.
 - Rate of Delivery: Speaking too fast may confuse listeners; too slow may bore them. A balanced speed keeps attention.

6. Personal Appearance

How you look before you speak already communicates a message.

- Examples:
 - Clean, neat, and suitable dress in interviews reflects seriousness.
 - Overly flashy or untidy dressing distracts the audience from the message.
 - Confident body language (standing erect, walking energetically, smiling occasionally) builds credibility.

○

7. Environment and Artifacts

The surroundings and objects used in communication also carry meaning.

- Examples:
 - A well-organized office gives an impression of discipline and efficiency.
 - Classroom seating arrangement (circular vs. rows) changes how students engage.
 - Personal belongings like jewelry, watches, or gadgets often symbolize status and taste.

Quick Reference Chart

Type	Meaning	Examples
Proxemics (Space)	Use of distance in interaction	Close with friends, distant with strangers, teacher moving in class
Haptics (Touch)	Communication through touch	Handshake, hug, pat on back
Chronemics (Time)	Use of time in communication	Being punctual, spending more time listening
Kinesics (Body)	Body movements, gestures, posture, expressions	Smile, eye contact, hand gestures, slouching
Vocalics (Voice)	How we speak: pitch, tone, volume, rate	Loud vs. soft, rising tone for question, fast vs. slow speaking
Personal Appearance	Outer look and dressing	Neat dressing, energetic walk, professional clothing
Environment & Artifacts	Surroundings and objects used	Tidy office, classroom seating, personal gadgets

7.3.1 Open and Closed Body Language

Body language refers to the conscious and unconscious movements, gestures, and postures through which our feelings, attitudes, and intentions are communicated. Often, it conveys much more than spoken words. It is important in communication because it:

- Constitutes the majority of what we communicate.

- Reinforces and sometimes substitutes spoken language.
- Reveals the underlying intention behind words.
- Expresses emotions and states of mind more directly than verbal expression

i. Open Body Language

Open body language generally reflects receptiveness, honesty, and confidence. People with open personalities tend to be expressive, interactive, and physically engaged when communicating. Their movements are often expansive and welcoming.

- **Uncrossed legs:** A relaxed sitting posture with uncrossed legs usually signals openness and readiness for dialogue. However, if the person leans forward with elbows resting on the thighs, it could indicate worry, concentration, or the desire to emphasize an important point.
- **Uncrossed arms:** Open arms often suggest frankness, willingness to listen, and trustworthiness. For example, politicians waving with open palms or raising both arms in a rally are using this posture to project sincerity, goodwill, and inclusiveness.
- **Examples from daily life:**
 - A teacher walking freely across the classroom with open gestures keeps students engaged.
 - A friend leaning back comfortably with open palms while chatting conveys ease and trust.
 - A salesperson with open posture and steady eye contact is more likely to gain the customer's confidence.

ii. Closed Body Language

Closed body language often indicates defensiveness, discomfort, nervousness, or an unwillingness to share. Such postures typically reduce approachability and may discourage interaction.

- **Crossed arms:** This stance conveys defensiveness or a closed mindset, as though the person has already made up their mind and is unwilling to reconsider. It can also appear hostile and resistant to dialogue.
- **Crossing of legs when seated:** Resting one leg over the other in a rigid manner can suggest both defensiveness and aggression, signaling that the speaker does not wish to waste time explaining their perspective.
- **Arms held in front of the body:** A common gesture of nervousness or lack of confidence. For instance, job aspirants in interviews or employees on their first day may unconsciously keep their hands in front as a form of self-protection.

- Crossing of legs while standing: This posture has multiple interpretations. It can signal a relaxed state of mind or, depending on accompanying gestures, an eagerness to converse and share knowledge.
- Examples from daily life:
 - A student crossing arms and legs during a group discussion may signal reluctance to participate.
 - An employee at a meeting sitting stiffly with hands clasped tightly may reveal nervousness or insecurity.
 - A friend standing with crossed legs and folded arms during an argument may signal withdrawal or resistance.

7.3.2 Eye Contact and Facial Expression

Eye contact (also called *oculesics*) and facial expressions are among the most powerful aspects of nonverbal communication. They provide critical social and emotional cues that shape how messages are received and understood.

- Eye Contact: The eyes are often described as “windows to the soul.” Eye contact signals interest, attention, confidence, and involvement with the listener. A speaker who maintains appropriate eye contact appears trustworthy and engaged. Conversely, avoiding eye contact can be perceived as disinterest, boredom, dishonesty, nervousness, or even withdrawal from interaction.
 - *Examples:*
 - A teacher scanning the classroom and making eye contact motivates students to stay attentive.
 - During an interview, steady but not staring eye contact shows confidence, while looking down frequently may suggest insecurity.
 - In conversations, breaking eye contact while smiling can signal shyness or embarrassment.
- Facial Expressions: The human face is remarkably expressive and capable of conveying emotions more vividly than words. A simple smile, frown, or raised eyebrow communicates underlying emotions instantly. Facial expressions are also universal to a large extent, cutting across cultures and languages.

Seven universally recognized emotions communicated through facial expressions are:

1. Fear – widened eyes, raised eyebrows, tense mouth.
2. Anger – narrowed eyes, clenched jaw, tightened lips.
3. Surprise – raised eyebrows, wide-open eyes, open mouth.
4. Contempt – one side of the mouth raised, dismissive gaze.
5. Disgust – wrinkled nose, curled upper lip, squinting eyes.

6. Happiness – smiling mouth, crinkling eyes (genuine smile or “Duchenne smile”).
7. Sadness – downturned mouth, drooping eyelids, teary eyes.

Examples:

- A child smiling at a parent conveys happiness without saying a word.
- A manager frowning during a presentation signals dissatisfaction to the speaker.
- Raised eyebrows during a lecture may show either surprise or a request for clarification.

7.3.3 Hand Gestures

Hand gestures are deliberate or unconscious movements of the hands and arms used while speaking to emphasize or clarify ideas. They form a crucial part of overall body language and make communication more expressive, structured, and engaging.

- Illustrative Function: Hand gestures can literally describe what is being spoken.
 - *Examples:*
 - Drawing a circle in the air while explaining the shape of a circle.
 - Tracing a tall line upward with the hand to show “height” or “growth.”
 - They can also work metaphorically.
 - Making a circular motion with the hand to suggest “everyone” or “wholeness.”
 - Spreading both hands outward to indicate inclusiveness or openness.
- Pointing and Indicating: Gestures can be used to direct attention to people, objects, or ideas.
 - *Example:* Pointing at a diagram during a lecture and saying, “Look at this section here.”
 - In everyday talk, pointing at a distant landmark while giving directions makes the message more effective.
- Emphasis and Structure: Hand movements add rhythm and emphasis to speech. They help in organizing and highlighting key ideas.
 - *Examples:*
 - Showing fingers when counting: “First... second... third...”
 - A chopping motion with the hand to stress determination or urgency.
 - Raising a hand slightly to signal pause or silence.

- Emotional Clues: Gestures can reveal inner feelings even when words don't. They often indicate confidence, nervousness, anxiety, or dishonesty.
 - *Examples:*
 - Open palms generally suggest honesty and sincerity.
 - Fidgeting with fingers or tapping hands on the table may reveal nervousness.
 - Hiding hands behind the back can sometimes signal defensiveness.

Importance of Hand Gestures in NVC

- They make communication lively and memorable.
- They support understanding by providing visual reinforcement.
- They help express abstract ideas more clearly.
- They often reveal a speaker's true emotional state.

7.3.4. HANDSHAKES

Handshake is perhaps the first sign of communication when a person meets one on one. The way you shake your hands says a lot about who you are and in what frame of mind you are about to attend the meeting. Different Types of Handshakes are used commonly in informal settings when a meeting is about to begin or end, or as part of an introductory round, crucial for leadership and workplace dynamics.

TYPES OF HANDSHAKES

Handshakes date back to the cavemen who used to put up their hands when greeting each other to show hands-free of weapons, intending friendliness. Over time, the greeting signal changed to taking each other's hand showing a warm welcome. A body language enthusiast can spot several different types in what most of us conceive as a simple greeting gesture.

- **FIRM HANDSHAKE**

When both parties extend their hands and shake on an equal level with no one hand above the other, it is a firm and neutral handshake. This type of handshake is often seen in workplace settings, indicating equality and mutual respect in nonverbal communication.

- **DOMINANT HANDSHAKE**

When one person extends his hand by offering his palm down, either he is of a dominant personality by nature or is consciously trying to signal his intention of decision making in the forthcoming discussion or negotiation. These types of conscious dominant handshakes are most commonly seen in power struggles by politicians in front of the camera. The way to counter a dominant handshake is to hold the dominating person's arm while shaking his hand. This can be a key aspect in leadership scenarios.

- **SUBMISSIVE HANDSHAKE**

Responding to a palms-down dominating hand would be a submissive hand, indicating an easy-going or submissive personality. It indicates to the counterparty your willingness to give in to demands across the table. Also, the handshake should be firm. If you offer your hand too softly, it indicates submissiveness. Understanding these cues is vital in workplace interactions and leadership roles.

- **WET FISH HANDSHAKE**

Merely offering fingers rather than the full hand or a limp hand results in an awkward handshake. This might be done by an unwilling female forced into a handshake by a male. Or when the intention to shake hands is not expressed very decisively. Recognizing and avoiding such handshakes can improve nonverbal communication and enhance bonding.

- **HANDSHAKE WITH FEMALES**

Most of the time when greeting a person of the opposite sex, it is difficult to judge whether a handshake is acceptable to the female. It is best for the female to offer the hand. A female willing to shake hands shows an openness to try new things. Too soft a handshake by a female is not considered positively by males. If a female is offering you a handshake, match the firmness of her handshake. Like men, they too don't like clumsy handshakes. This is especially relevant in promoting gender equality in workplace settings and leadership.

7.3.5 HANDSHAKE MISTAKES TO AVOID: COMMON ERRORS AND THEIR IMPACT

Handshakes, while important for establishing connections and leaving positive impressions, can also be susceptible to mistakes that may have a negative impact. This subheading focuses on identifying common handshake mistakes and discussing their potential consequences in various social and professional settings, including workplaces and leadership contexts.

- **THE WEAK HANDSHAKE**

Exploring the negative impression caused by a weak handshake, where the grip lacks firmness and confidence. Discussing how a weak handshake can convey a lack of assertiveness, professionalism, and undermine the establishment of trust. This is crucial in nonverbal communication and leadership scenarios.

- **THE OVERLY AGGRESSIVE HANDSHAKE**

Addressing the issue of an overly aggressive handshake, where the grip is excessively tight or accompanied by excessive force. Analyzing how this type of handshake can be perceived as domineering, intimidating, or disrespectful, potentially damaging rapport and creating discomfort. Effective leadership requires avoiding such mistakes.

- **THE INAPPROPRIATE DURATION**

Discussing the importance of maintaining an appropriate duration for a handshake, avoiding both excessively brief and excessively prolonged handshakes. Highlighting how a handshake that is too brief may come across as dismissive, while one that lingers for too long can be

interpreted as intrusive or awkward. This balance is essential in workplace interactions and leadership.

- **THE LACK OF EYE CONTACT**

Emphasizing the significance of maintaining eye contact during a handshake. Exploring how avoiding eye contact can be perceived as disinterest, lack of confidence, or a failure to establish a genuine connection. This is a critical aspect of nonverbal communication in leadership and workplace settings.

- **IGNORING CULTURAL NORMS**

Handshakes, while globally recognized, are not universally practiced or interpreted in the same way. What is considered polite and professional in one culture may be inappropriate or even offensive in another. Ignoring such cultural differences can lead to misunderstandings, discomfort, or strained relationships. Effective leaders and professionals must be culturally sensitive to navigate diverse workplaces and global interactions.

Cross-Cultural Examples

- **Muslim Cultures (Gender Sensitivity):**
In many Muslim-majority societies, physical contact between unrelated men and women is discouraged. A male professional may extend his hand to a female colleague only to find her declining, not out of disrespect but in adherence to religious and cultural norms. The culturally sensitive approach is to wait for the woman to initiate, or to offer a verbal greeting with a nod or hand placed on the chest instead.
- **East Asian Cultures (Japan, China, South Korea):**
In Japan, handshakes are often replaced by bows, which convey respect and humility. When handshakes do occur, they are typically softer and shorter in duration compared to the firm grips expected in the West. In China, prolonged handshakes may occur, sometimes accompanied by holding the arm or shoulder as a sign of warmth. Misinterpreting these as awkward or insincere can cause cross-cultural friction.
- **South Asian Cultures (India, Nepal):**
In India, traditional greetings like “**Namaste**” (palms pressed together) are common, especially in formal or religious contexts. While handshakes are now widespread in business, they are often lighter in grip. Overly firm Western-style handshakes may be perceived as aggressive.

- **Middle Eastern Cultures (Men-to-Men):**
Handshakes between men in Middle Eastern countries can last longer than in Western cultures, and may even be accompanied by touches on the arm or shoulder as signs of warmth and sincerity. However, these same gestures between men and women are usually avoided unless the woman initiates.
- **European Cultures (Varied Norms):**
In countries like **France**, light handshakes are common, often accompanied by a kiss on the cheek among acquaintances. In contrast, **Germany** prefers firm, brief handshakes, and anything less may be interpreted as lack of confidence.
- **African Cultures:**
Handshakes can take on unique forms — for example, in parts of **West Africa**, handshakes may involve additional finger snaps at the end. In some contexts, greetings are lengthy rituals involving multiple steps, which emphasize respect and community rather than efficiency.
- **HANDSHAKE FUMBLE**

Addressing the mistake of using an inappropriate handshake style for the given context. Discussing how using a formal handshake in a casual setting or vice versa can create a mismatch and hinder effective communication or rapport-building. This adaptability is crucial in leadership.

By highlighting these common handshake mistakes, individuals can become more aware of their actions and strive to avoid them, thereby improving their handshake etiquette and making a positive impression in social and professional interactions enhancing bonding.

- **THE WEAK HANDSHAKE**

When a hand offered is withdrawn too quickly, the other person offering his hand to shake would be left with his hand dangling in air. You would again offer your hand by which time he would have withdrawn, hence leading to the handshake fumble. The best way to avoid this is to hold out your hand only in situations where you are sure the other party is not hostile. In case the person has agreed to meet you rather unwillingly, it is best to nod in greeting and wait for the person to offer a handshake. On neutral grounds, remember to hold out your hand long enough to allow the other person to react. Avoiding such fumbles is essential for effective nonverbal communication and bonding in the workplace.

7.4 Cross-Cultural Diversity in Nonverbal Communication

Nonverbal communication varies widely across cultures, often carrying meanings that can strengthen understanding or create misunderstandings in cross-cultural settings. Gestures, eye contact, touch, space, and body movements may be interpreted differently depending on

cultural norms and values. Awareness of these differences is crucial for effective global communication.

Examples:

- **Eye Contact:**
In Western cultures (e.g., USA, Germany), direct eye contact shows confidence and honesty. In some Asian cultures (e.g., Japan, South Korea), prolonged eye contact may be seen as disrespectful or confrontational.
- **Gestures:**
The “thumbs up” gesture means approval in many countries but can be offensive in parts of the Middle East and South America. Similarly, the “OK” sign (circle with thumb and index finger) is positive in the USA but rude in Brazil and Turkey.
- **Personal Space (Proxemics):**
People in Latin American and Middle Eastern cultures are comfortable standing closer during conversations. By contrast, North Americans and Northern Europeans prefer more personal space, and standing too close may feel intrusive.
- **Touch (Haptics):**
In Mediterranean and Arab cultures, greetings often involve hugs, cheek kisses, or extended handshakes. In contrast, in East Asian cultures like Japan or China, physical contact is minimal, and bowing is more common.
- **Facial Expressions:**
While basic emotions (happiness, sadness, anger, fear, surprise, disgust, contempt) are universal, their display varies. For example, in the US, smiling is frequent and seen as friendliness, whereas in Russia or Japan, excessive smiling may be viewed as insincere.

Importance of Cross-Cultural Awareness of Nonverbal Communication

Nonverbal communication plays a crucial role in conveying emotions, attitudes, and intentions, but its interpretation varies widely across cultures. Being aware of these cultural differences is essential to avoid misunderstandings and to build meaningful connections.

Why It Is Important:

- **Avoids Misinterpretation:** A gesture or expression seen as positive in one culture may be offensive in another.
- **Strengthens Relationships:** Sensitivity to nonverbal norms shows respect, which fosters trust and cooperation.
- **Improves Professional Effectiveness:** In multicultural workplaces and global business, awareness ensures smoother interactions and negotiations.
- **Promotes Inclusivity:** Understanding diverse nonverbal cues makes communication more adaptive and respectful.

Example:

In the Middle East, extended handshakes between men signal warmth and sincerity, while in East Asia, minimal touch and bowing are preferred. A culturally aware communicator adjusts accordingly to maintain respect.

7.4 Do's and Don'ts in NVC

Following are some do's and don'ts while using NVC in meeting people and during interviews:

Do's

Make eye contact: Look in the eyes of other people while talking to show that we are paying attention. Avoid staring intently or glancing around the room. Our eye contact must show our focused attention and confidence.

Smile and nod: Nonverbal cues are proof that we are engaged in the conversation. Smiling and nodding in response while someone is talking impresses the speaker that we are listening. While talking, these gestures help to punctuate a statement. But smiling and nodding continuously can convey impatience and the desire to rush through a meeting or conversation.

Use natural facial expressions: We must be aware of what our positive and negative facial expressions look like: look in the mirror while on the phone before heading into a formal conversation. Emoting nonverbally is natural. If we avoid using facial expressions, it can signal a lack of interest and passion.

Shake hands: Handshakes are like firm – everyone's is a little different.? A handshake must be a firm grip, and a firm shake from the elbow (not the wrist) and make eye contact simultaneously to make it more meaningful. If the hands tend to be cold, rub them together to warm them up before entering the room. If they tend to sweat, blot them with a tissue.

Dress appropriately: Dress appropriately according to the meeting or occasion.

Don'ts

Fidget: We must ask our friends or family what some of our subconscious habits might be, so that we can keep them at bay. Common nervous fidgeting includes tapping a foot, shaking a leg, clicking a pen, biting nails, and playing with hair.

Slouch: As a rule, sit with the back straight against the chair and your feet on the floor during an interview or any formal meeting. A slight lean toward the interviewer, with either the torso or just the head, can make the interviewer feel that you are engaged. But don't overdo it. And don't lean back. Be mindful of standing and walking straight when entering and leaving the interview room, as well as while taking an office tour (or the like).

Crossed arms: Crossed arms are a sign of defensiveness and resistance. When they are open at the sides or naturally placed on the table in front, you appear more approachable. Overuse hand gestures: Just like facial expressions, hand gestures should be natural and moderate. Keeping a pen in one hand or resting both hands on the table in front of you are good control options. Concealing the hands – behind the back, under the table, or sticking them in the pockets conveys the message of something to hide.

Clear your throat: Compulsively clearing the throat shows nervousness. A sip of water helps to avoid dryness in the mouth. A throat lozenge or warm tea with honey ensures a clear throat before heading into the interview room or formal meeting.
